

Sales in initially cheaper and more expensive school neighborhoods

Quarter-mile sample; fixed groups based on each site's 2008–2012 median sale price

Common cutoff: \$64,734 (2022 dollars), the median of pre-period site medians across treated and control sites.
Each sale counts once. A site's category stays fixed; sales are not reclassified using their own prices.
0 sales lack a site pre-period price and are omitted. Dotted line marks 2013; counts are not turnover rates.
