

Event study, all study sites

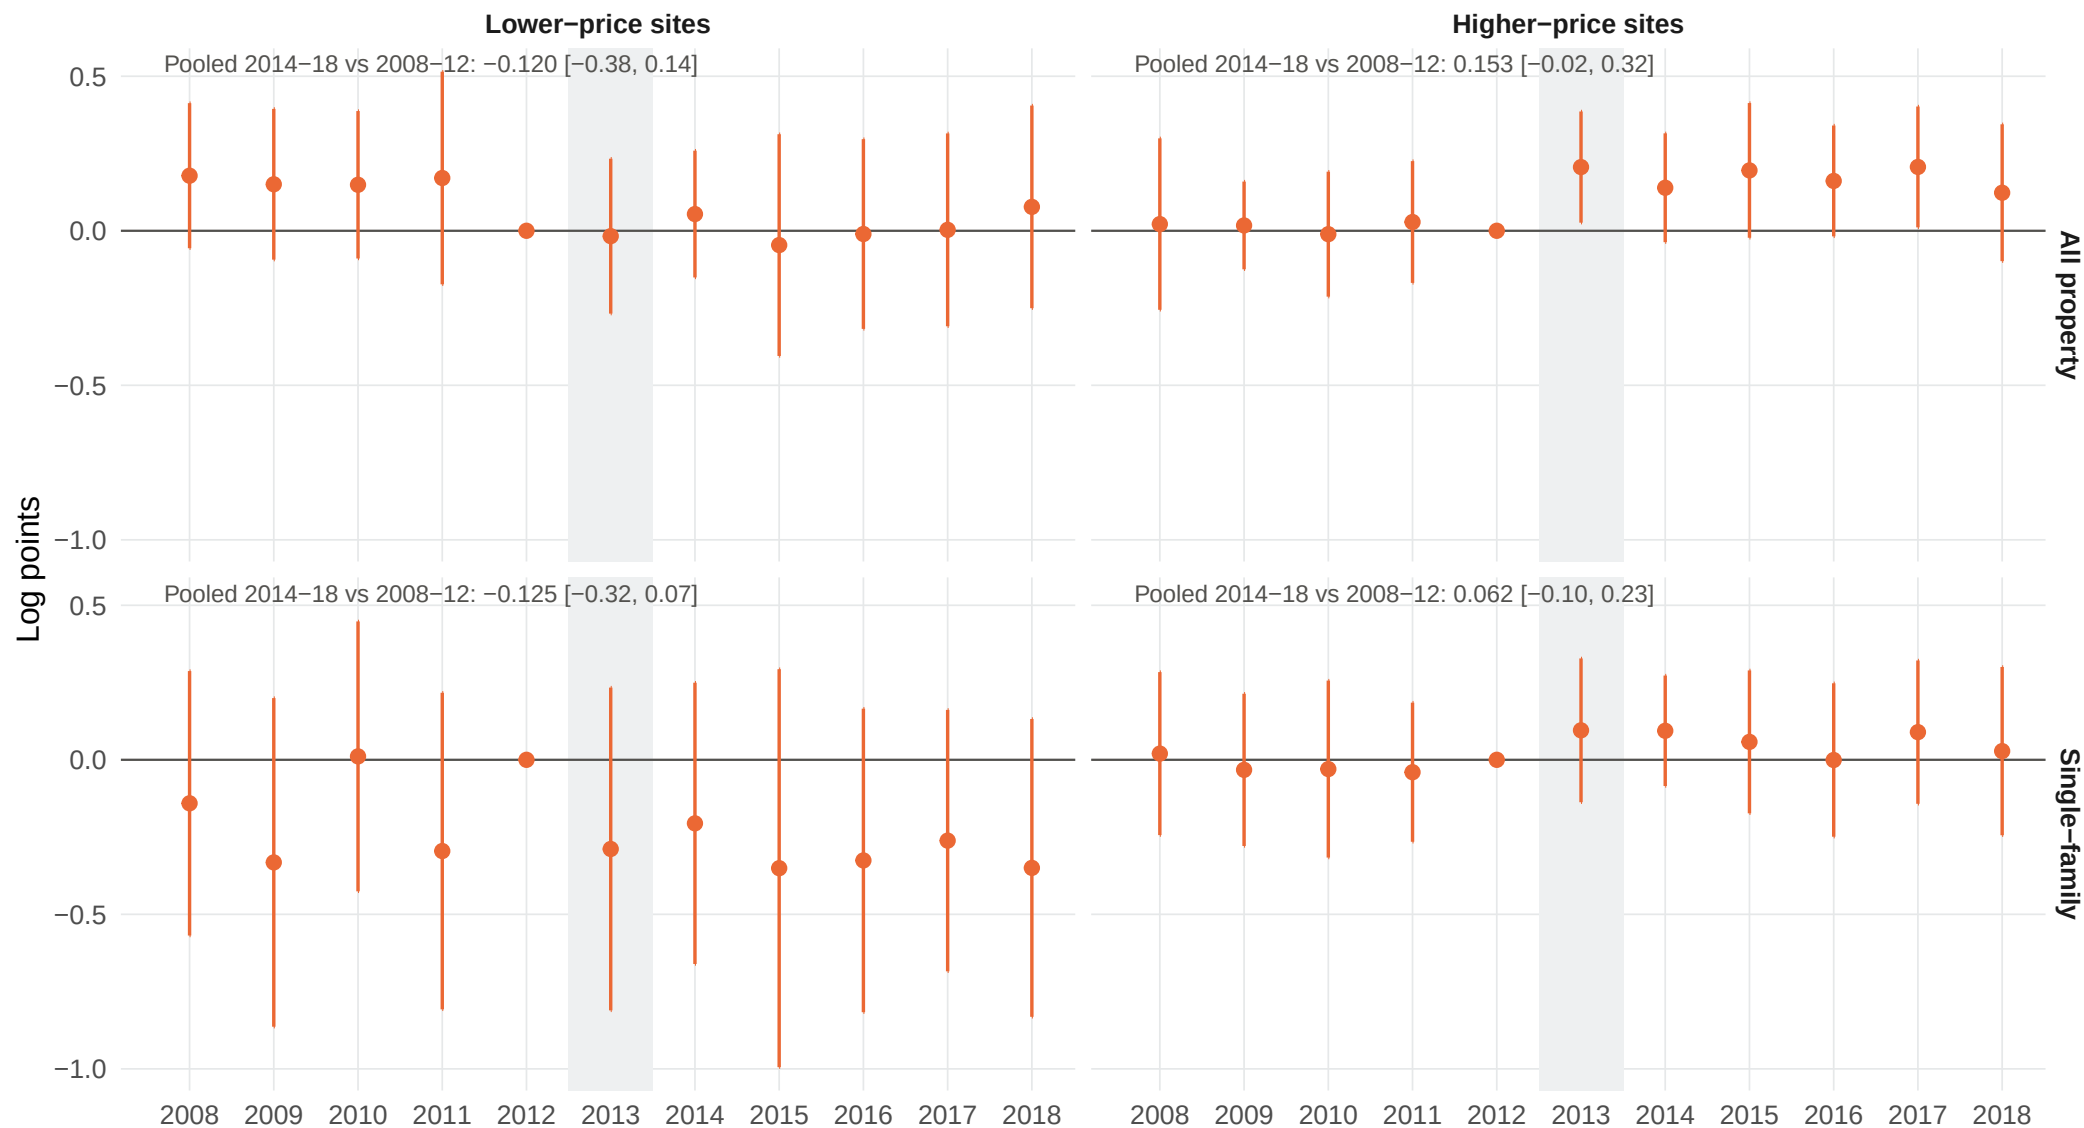

Closed relative to stayed-open sites; 2012 = 0

Sales within a quarter mile of a closed (stayed-open) site and not the other group, excluding sales near welcoming schools, other candidates, and vacated welcoming buildings. Log real price; site and year fixed effects plus hedonics (size, lot, age, rooms, beds, baths, residence type, quality, condition, REO and quick-resale indicators, 2-6-unit indicator); all clean sales, equal weight per sale; 95% intervals clustered by school site. Shaded: 2013.

Event study by baseline price tier

Closed relative to stayed-open sites; 2012 = 0

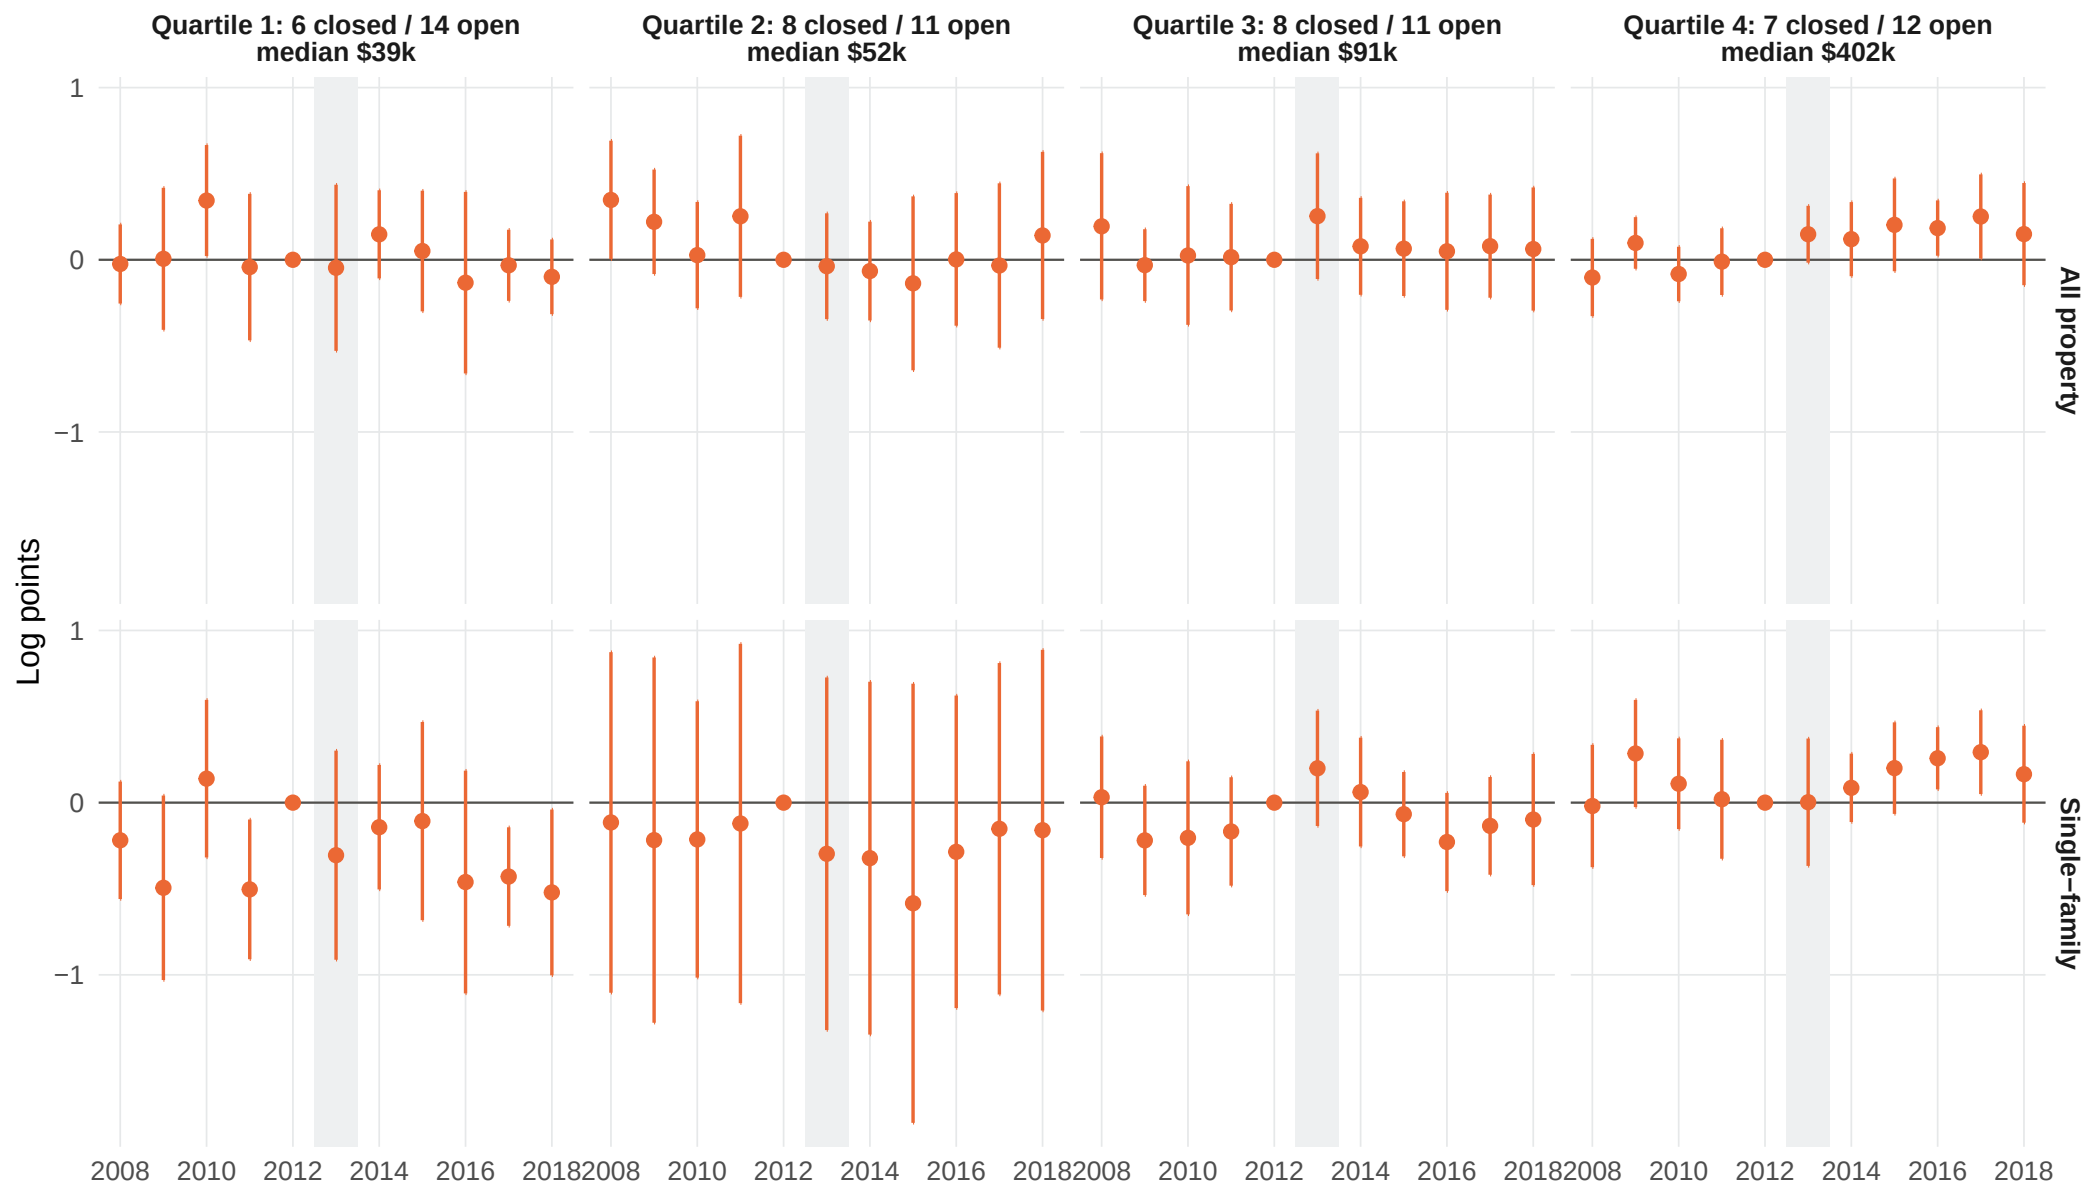

Tiers: each site's 2008-2012 median real sale price, split at the median of site medians (14 closed / 25 stayed-open lower-price sites; 15 / 23 higher-price).

Sales within a quarter mile of a closed (stayed-open) site and not the other group, excluding sales near welcoming schools, other candidates, and vacated welcoming buildings. Log real price; site and year fixed effects plus hedonics (size, lot, age, rooms, beds, baths, residence type, quality, condition, REO and quick-resale indicators, 2-6-unit indicator); all clean sales, equal weight per sale; 95% intervals clustered by school site. Shaded: 2013.

Event study by baseline price quartile

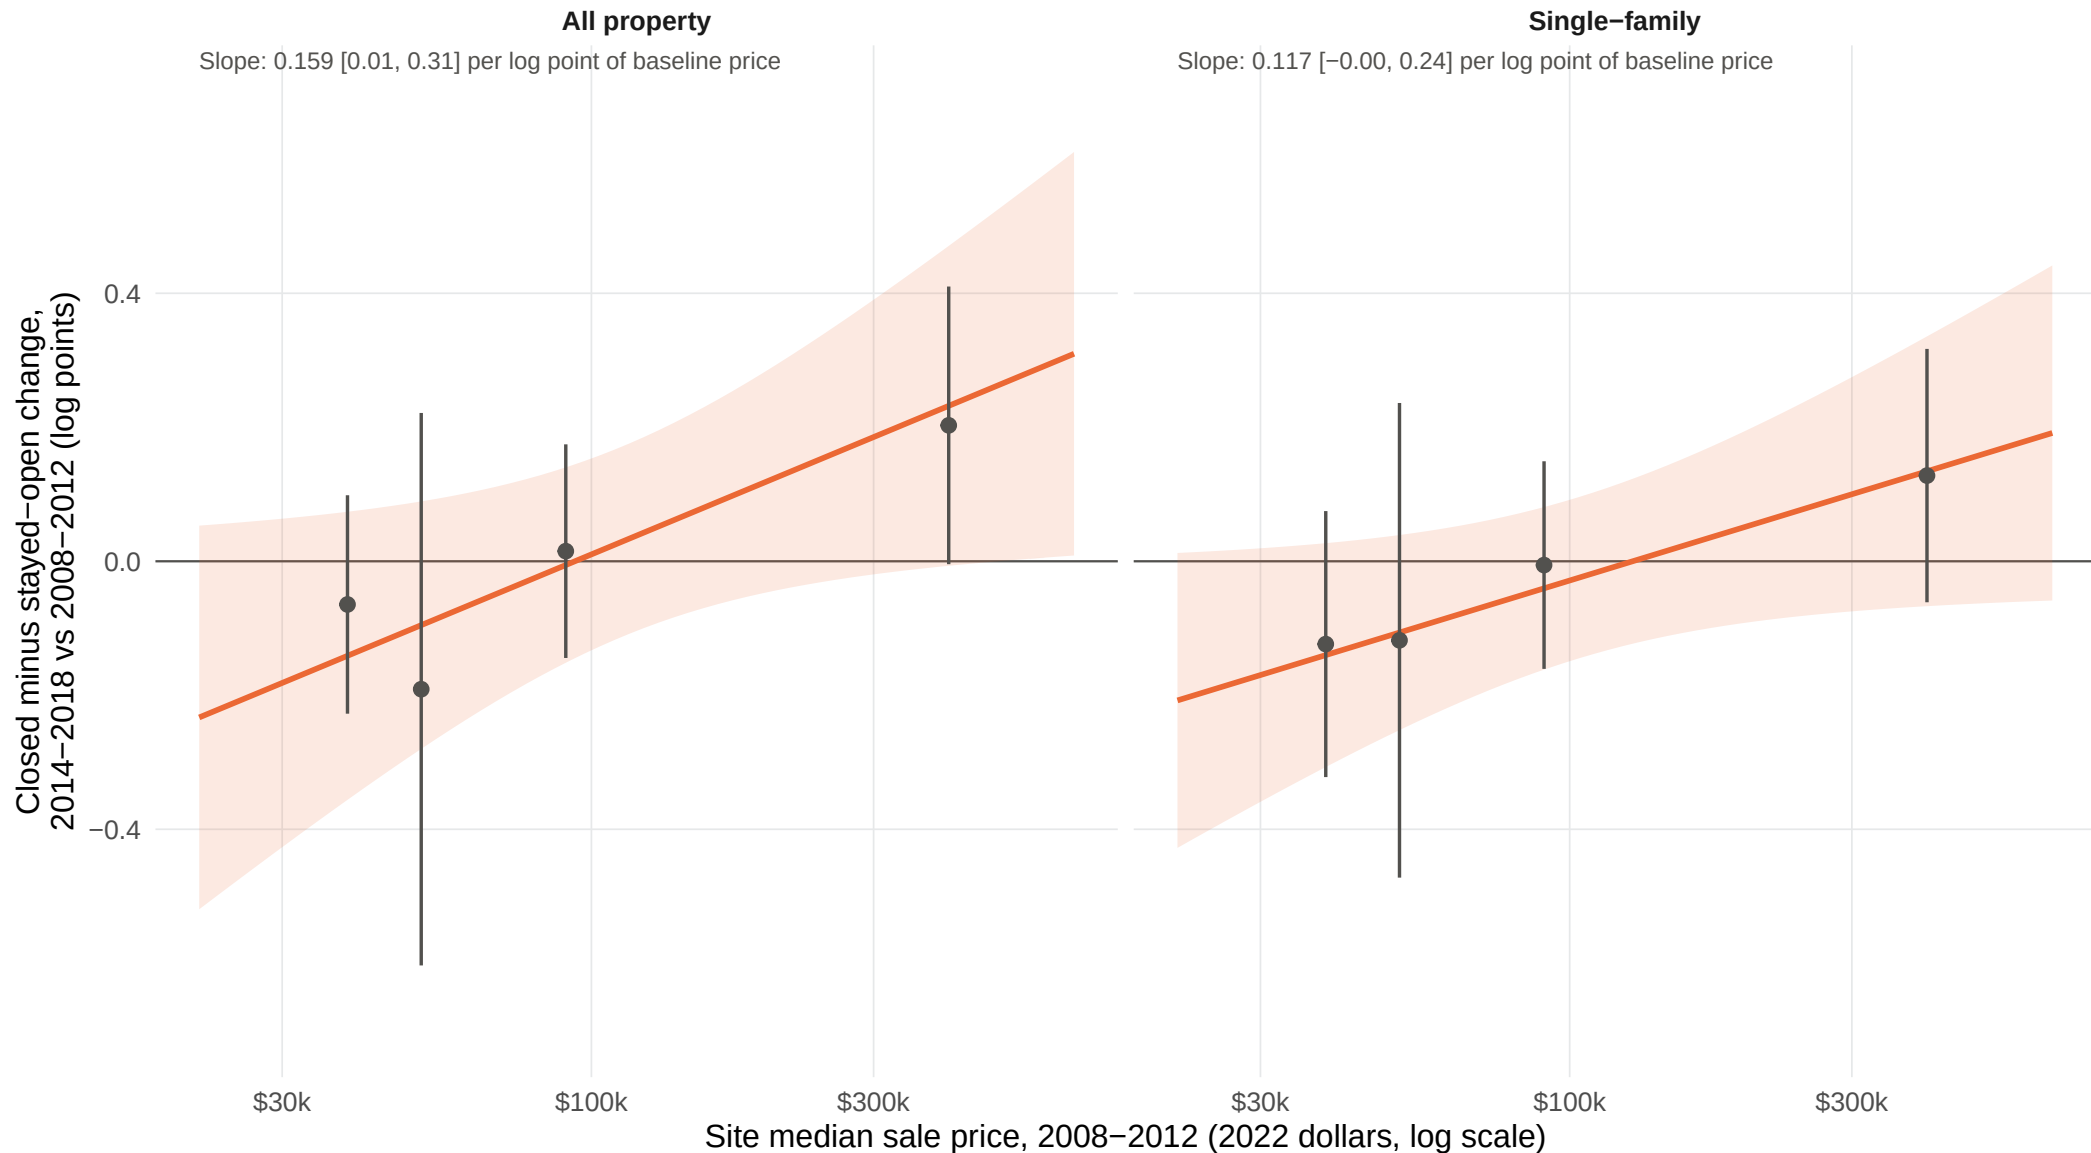

Closed relative to stayed-open sites; 2012 = 0

Sales within a quarter mile of a closed (stayed-open) site and not the other group, excluding sales near welcoming schools, other candidates, and vacated welcoming buildings. Log real price; site and year fixed effects plus hedonics (size, lot, age, rooms, beds, baths, residence type, quality, condition, REO and quick-resale indicators, 2-6-unit indicator); all clean sales, equal weight per sale; 95% intervals clustered by school site. Shaded: 2013.

Closure effect by the site's baseline price level

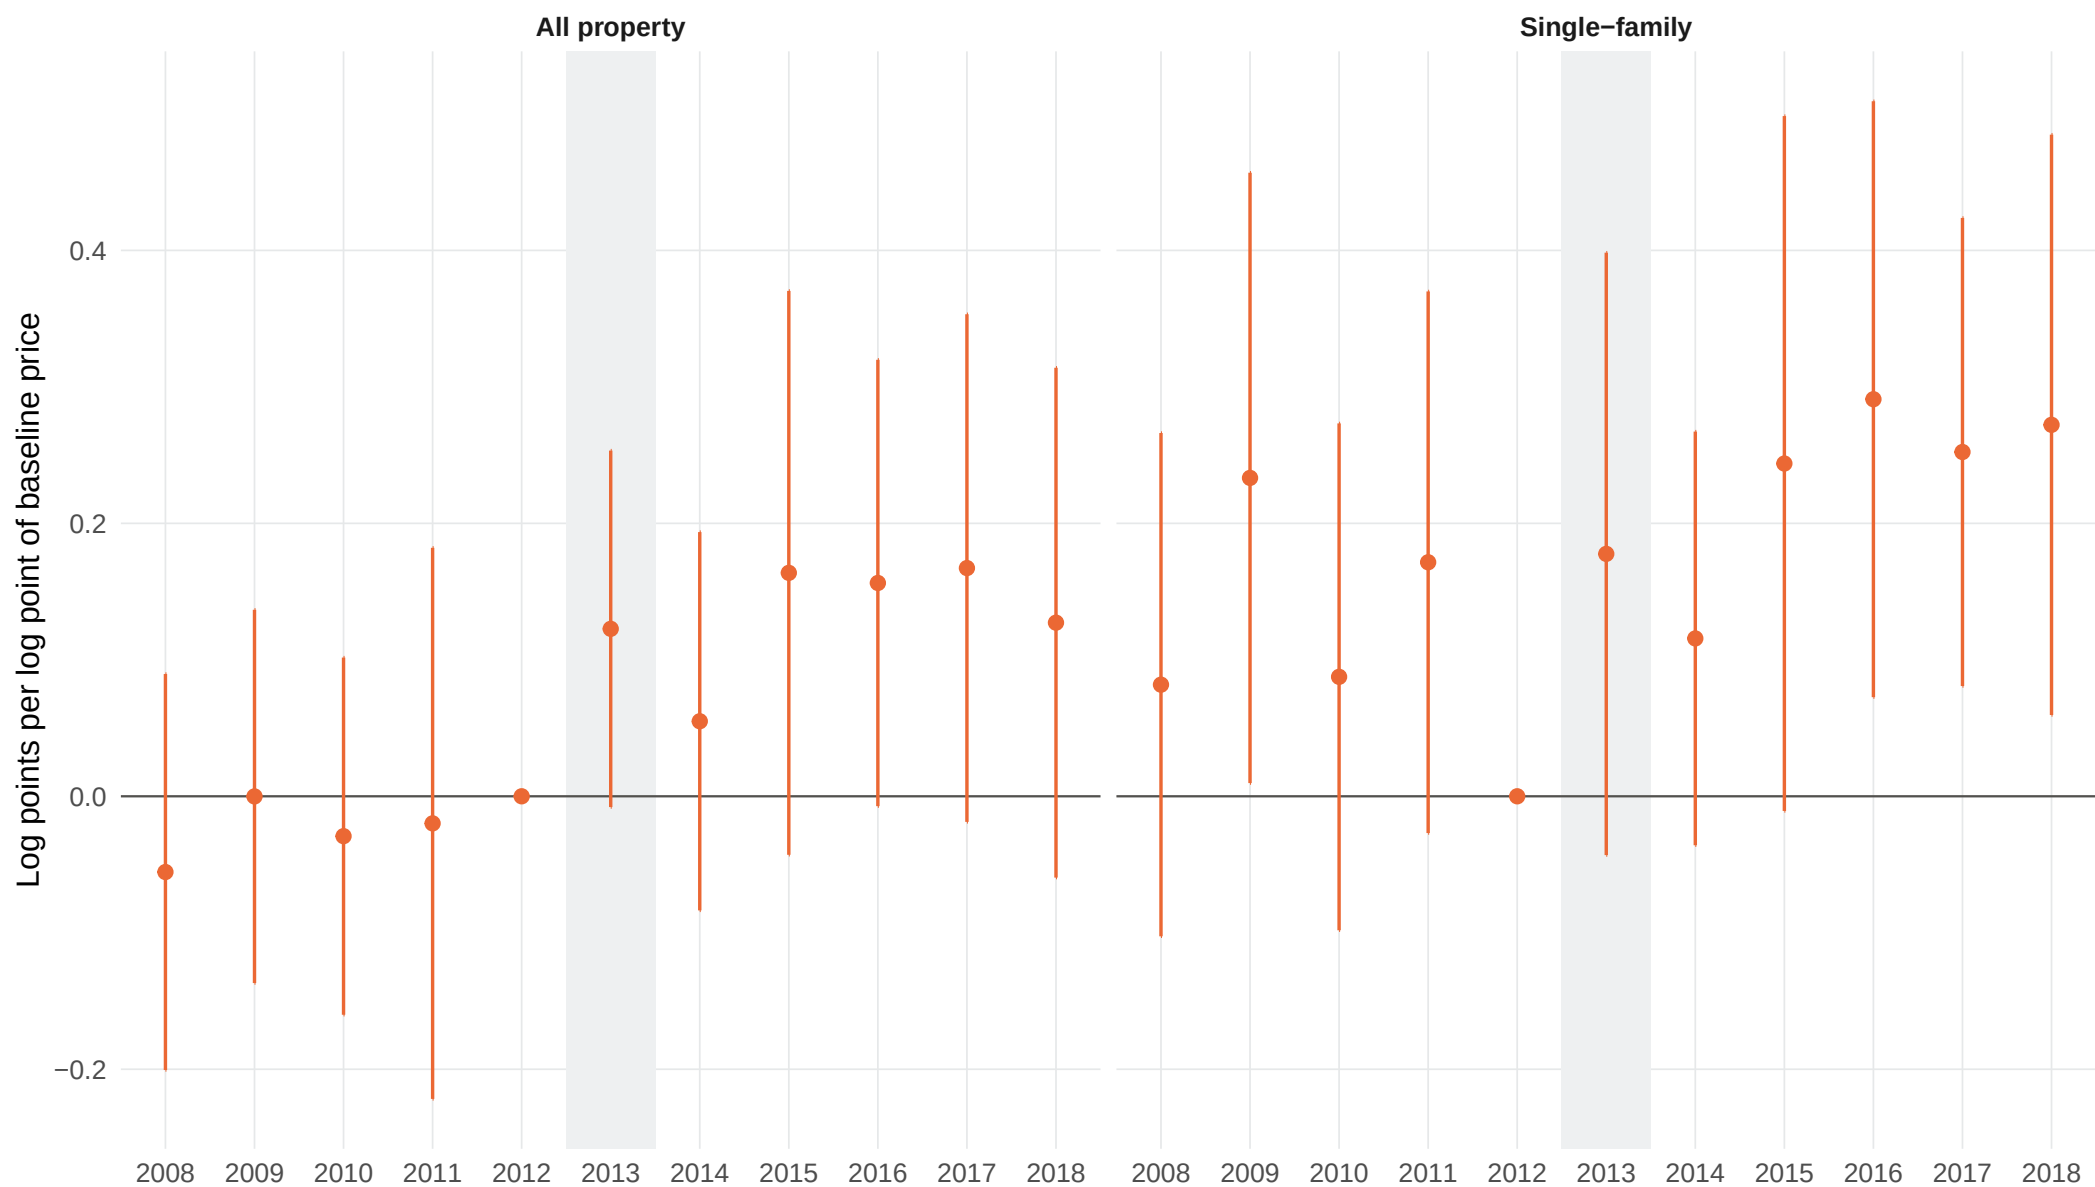

Line: continuous interaction with 95% band; gray points: separate estimates within each quartile

The continuous model also lets year effects vary with baseline price for all sites. Sales within a quarter mile of a closed (stayed-open) site and not the other group, excluding sales near welcoming schools, other candidates, and vacated welcoming buildings. Log real price; site and year fixed effects plus hedonics (size, lot, age, rooms, beds, baths, residence type, quality, condition, REO and quick-resale indicators, 2-6-unit indicator); all clean sales, equal weight per sale; 95% intervals clustered by school site. Shaded: 2013.

Year-by-year gradient in baseline price

Coefficient on closed x log baseline price in each year, relative to 2012

Sales within a quarter mile of a closed (stayed-open) site and not the other group, excluding sales near welcoming schools, other candidates, and vacated welcoming buildings. Log real price; site and year fixed effects plus hedonics (size, lot, age, rooms, beds, baths, residence type, quality, condition, REO and quick-resale indicators, 2-6-unit indicator); all clean sales, equal weight per sale; 95% intervals clustered by school site. Shaded: 2013.
